**Problem 1** 7.6.3 Problem 2

If  $|f_n(x) - f_n(y)| \leq M|x - y|^\alpha$  for some fixed  $M$  and  $\alpha > 0$  and all  $x, y$  in a compact interval. Show that  $\{f_n\}$  is uniformly equicontinuous

---

**Problem 2** 7.6.3 Problem 5

Give an example of a sequence that is uniformly equicontinuous but not uniformly bounded

**Problem 3** 7.6.3 Problem 6

Prove that the family of all polynomials of degree  $\leq N$  with coefficients in  $[-1, 1]$  is uniformly bounded and uniformly equicontinuous on any compact interval.

**Hint:** Let the compact interval be  $[a, b]$ , and each polynomial in the family has the form

$$p(x) = c_0 + c_1x + c_2x^2 + \cdots + c_Nx^N \quad x \in [a, b], \quad c_i \in [-1, 1], \quad 0 \leq i \leq N$$

To prove uniform equicontinuity, show that the derivatives of all polynomials in the family are uniformly bounded.

---

**Problem 4** 7.6.3 Problem 9

Give an example of a uniformly bounded and uniformly equicontinuous sequence of functions on the whole line that does not have any uniformly convergent subsequences.

**Hint:** Consider the following sequence of functions on  $\mathbb{R}$

$$f_n(x) = \begin{cases} 0 & x \leq n-1 \\ x - (n-1) & n-1 < x \leq n \\ 1 & x > n \end{cases}$$
